

Maintenance Recommendations

After Installation

Your window film was applied using a special solution to activate the adhesive on the Vela™ film, followed by squeegeeing to remove the excess water. However, the drying process is still continuing, and it will take several days or weeks to complete.

Cleaning Instructions

Although Vela™ film is designed with an excellent scratch resistance hard coat, when maintaining Vela™ film, it is preferable not to use abrasive products. To clean the Vela™ film, use fresh, soft material such as lint free towel or cloth to wash and dry the film surface. In instances of a partial installation, care should be made in cleaning the edges, especially when they are exposed and unsealed to not cause film separation.

Take care!

Please keep these instructions handy, and show them to your window cleaner.

Please do not clean the Vela™ film for 30 days after installation.

Do not use harsh Ammonia-based cleaners! Wash the film with mild solutions of liquid soap and water.

The use of vapor cleaning is not recommended.
